

## Customized Exploded View

JJ Ventrella 5/11/2005

This document demonstrates a JavaScript API which allows the author of a 3D Annotation in a PDF document to manually arrange the parts of a model, define the arrangement as an Exploded View, and then play an animation which interpolates the model from its default state to the Exploded View.

- 1 Manually re-arrange the parts of your model to the desired configuration

- 2 Click here... SAVE ...to specify this configuration as the exploded-view
- 3 Click here... START ...to set the configuration to the start of the animation
- 4 Click here... EXplode ...to run the exploded view animation
